

Ex: No: 5 Illustration of Interprocess Communication using Shared Memory

Date:

Aim:

To write a C program to implement inter process communication using shared memory.

Algorithm:

Program:

```
#include<stdio.h>

#include<sys/shm.h>

#include<sys/ipc.h>

int main() {

int child,shmid,i;

char *shmptr;

//child=fork();

if(!child)

{

shmshmid=shmget(2041,32,0666|IPC_CREAT);

shmptr=shmat(shmid,0,0);

printf("\nParent writing\n");

for(i=0;i<10;i++)

{

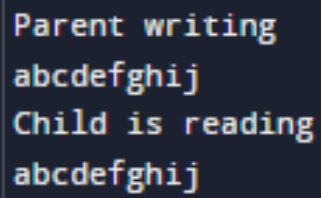

shmptr[i]='a'+i;

putchar(shmptr[i]);

}
```

```
    }  
    shmget(2041,32,0666);  
    shmptr=shmat(shmid,0,0);  
    printf("\nChild is reading\n");  
    for(i=0;i<10;i++)  
        putchar(shmptr[i]);  
    shmdt(NULL);  
    shmctl(shmid,IPC_RMID,NULL);  
    return 0;  
}
```

Output:

```
Parent writing  
abcdefghij  
Child is reading  
abcdefghij
```

Result:
